Applicant's argument in the amendment filed December 2, 2004 of the interpretation that the replacement of the printer entirely is a replacement of the recording materials, has been deemed persuasive since the replacement of the printer will eliminate one of the features recited in claim 1 as argued by Applicant. In particular, if the printer is removed from the camera then the claimed electronic still camera will only have a camera section and will not have a printer section.

As such, claims 1-16 are herein deemed allowable over the prior art of record; the reasons for allowance are as follows:

In regards to claim 1, the prior art of record does not disclose nor fairly suggest an electronic still camera comprising a camera section for picking up electronic images of subjects through an image sensor and memorizing digital image data of the electronic images, and a printer section for recording images on recording materials on the basis of the digital image data, characterized by comprising: a main power source for supplying the camera section and the printer section; a loading chamber for holding the recording materials in a position for allowing the printing section to print on the recording materials; and an electrical connection device provided in the loading chamber, for connecting the electronic still camera to an extending device that may be loaded in the loading chamber in place of the recording materials, for extending a particular function of the electronic still camera.

Claims 2-16 are dependant on claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
